

'BPAs' Help Keep Birds at Bay

Powered Aire Curtains solve customer's bird problem

This Powered Aire Dealer solved a Midwest Chemical Company's bird problem by incorporating Powered Aire Curtains with High Speed Roll up Doors.

Keeping birds out of the building was critical to this Manufacturer's process. No matter how fast the door cycled it was ZERO % effective in keeping the birds out when it was in the open position.

By installing 2 vertically mounted Powered Aire Curtains they were able to increase the velocity of the air across the opening thereby offering more of a deterrent to the birds.

The Customer reports that "the bird problem is almost extinct"!

Keep in mind when quoting doors that a Powered Aire Curtain will reduce the infiltration by up to 80%!

Typical applications include climate, insect, and environmental control at these type of door openings:

- Loading Docks
- Refrigerated Docks
- Ground Level
- Exterior Man
- Entrance
- Cooler / Freezer
- Interior room separation and many more.....

Include a Powered Aire Curtain option for all of your door quotes!
