## With Powered Aire Gas Heated Air Curtains

Choose Powered Aire gas heated air curtains for all types of architectural design applications. Let Powered Aire's engineering staff help you keep doorways aesthetically pleasing and comfortably warm while still providing 70% to 80% efficiency against infiltration.

**Top air intake  
with detached  
vertical stainless  
steel transition**

Want the benefit of a gas heated air curtain but not lose natural light? This top intake air curtain takes the air from the transition and blows it to the ground, keeping the customer entrance aesthetically pleasing and allowing the natural light to still shine in.

**Installations  
for every  
application!**

**Top air intake  
with vertical  
stainless steel  
transitions**

In this application, abundant headroom allows the indirect gas heaters to be moved higher so as not to affect traffic flow of equipment. A top air intake air curtain with a vertical transition completes this custom package.

**Standard  
installation  
with horizontal  
stainless steel  
transitions**

This indirect gas heated air curtain utilizes Powered Aire's standard horizontal mounted transitions and is typically used where there are no architectural design or headroom concerns.

**Contact Powered Aire for all of your custom air curtain needs!**
