

30 ft. air curtain allows guests to enjoy the view

The only thing
standing between you
and this view should be
nothing but...air.

When guests are not out on the disc golf course testing their skills they can enjoy the lakefront view from the barroom area with the help of the room's 30 ft. long wall of sliding glass doors.

The sliding glass doors can stay wide open for the players to come in and out as they please and for those sitting at the bar to enjoy the beauty of the course even when they are taking some time to rest their throwing arm.

Guests are able to hear all the sounds of nature from a comfortably air conditioned room in order to have the best of both the outside and inside environments. How is this possible you ask?

With 30 feet of Powered Aire's low-profile Mini-Power (MP) air curtains placed above the sliding glass doors of course!

The air that comes from the air curtains

acts as a shield to prevent any unwanted parts of nature, such as bugs and heat, from entering, while simultaneously allowing patrons to feel as if they are still engaged with the outside.

The owner of the course is able to keep the air conditioning on, knowing that the cool air will be contained inside the room and not wasted. This same shield enables guests to come inside and cool down and not feel completely closed off from the beautiful rural area.

Also, the air curtains are particularly known for how quiet they are, so that the residents of the bar can enjoy nature's sounds instead of a loud industrial machine, again adding to the simultaneous indoor and outdoor feel.

Avid disc golfers and first time disc golfers are all welcomed to come hone their skills on the course and enjoy a beverage at the new indoor/outdoor bar area!

PTW Air Curtain designed for pass-through windows

Busy pass-through windows often invite unwanted guests, like flies, fumes and unconditioned hot or cold air.

Powered Aire's new PTW model air curtain provides a protective barrier of air across the opening to keep the outside elements where they belong.

PTW Facts:

- Stainless steel.
- 24-in. wide, 5-in. high and 5.5-in. deep.
- Variable speed dial.
- 6 ft. cord plugs into standard receptacle.
- Swivel mounting bracket for easy installation.
- Heated model coming soon.
