NEW!

Powered Aire Offers Decorator Switches for Commercial Air Curtain Applications

Powered Aire has begun supplying decorator switches for its air curtains that will be installed in commercial locations.

The Decorator Switches are installed in a gang box that is typically recessed in the wall like a light switch (See Photo 1).

This promotes an attractive installation for any of Powered Aire's commercial exposed or above the ceiling models. These new controls are for remote mounting.

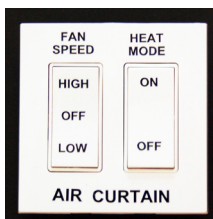

Industrial Air Curtain Switch

In contrast, Powered Aire's industrial models will continue to receive switch boxes that are surface mounted (See Photo 2).

These switch boxes project outward about 2 inches and can be constructed to house one or more switches.

Full Function Capability

Functionality will remain the same, with the capability of either type of switch to be constructed with various options, such as Heat On/Off and Hand/Off/Auto (Runs constantly in the Hand position, and activates with the door switch in the Auto position).
