Stainless Steel Air Curtains - Fabric Duct -- Make Up Air Fans

888-321-AIRE - Air Curtains that Push the Envelope - www.poweredaire.com

Take the **Powered Aire** Journey to energy cost savings - comfort - flying insect control

Planes...

Luggage isn't the only thing that exits an airport baggage conveyor opening. Unconditioned air likes to hitch a ride as the suitcases move from outside to inside. A major U.S. airport utilizes Powered Aire electrically heated ETD air curtains to stop infiltration of outside air and to provide heat at the opening, thus enhancing comfort for those awaiting their belongings.

Trains...

A busy, underground Amtrak station in a major U.S. city has plenty of debris and fumes that roll in with each train. This transportation giant utilizes Powered Aire ETD air curtains to keep these unwanted visitors from infiltrating the adjacent waiting area. As an aesthetic bonus, the air curtains are recessed into the curved ceiling above each sliding door opening.

Automobiles...

Air curtains by Powered Aire are used for climate control at a high-end automobile showroom (left), a transit bus garage (middle), and at the door opening of a motorhome (right). Three sizes of air curtains, same great protection against unwanted infiltration and flying insects!

Commercial Model ETD

Industrial Model EHD

Drive-thru Model PTW
