Powered Aire helps grocery stores put air infiltration, flying insect issues 'in the bag'

Busy grocery stores have days when their front doors rarely close. A steady stream of customers is key to good business, but so is storewide energy savings, sanitation and providing a comfortable environment for the people inside.

These principles converge when that front door opens..and opens ...and opens, allowing unconditioned outside air in. Flies, cigarette smoke and automobile fumes will tag along for the ride.

An 'aire' curtain by Powered Aire is specifically designed to reduce the intrusion of outside air, flying insects and other airborne contaminants when the door is open.

Specifying a Powered Aire 'aire' curtain has the following benefits:

- *Units approved as an alternative to costly and space-wasting vestibules.*
- *Sleek, stainless steel construction for aesthetic quality.*
- *Above-ceiling units for out-of-sight coverage.*
- *Custom engineering for unique applications.*
- *Optional space heater function.*
- *Versatile year-round use.*

**Contact Powered Aire for more information
or to discuss an air curtain application!**
