

Control switches

Commercial Applications

Decorator Switches- For remote mounting, these switches promote an attractive installation for any of Powered Aire's exposed or above the ceiling models.

Variable Speed Selector Switch- Directly varies the speed of a Mini Power air curtain or turns the unit off. Can be used with 120 and 208/240 motors only.

Industrial Applications

High/Off/Low Selector Switch- Switches between the high and low speeds or turns the air curtain off.

Heat On/Off Selector Switch- Turns the electric heat on and off while the fans are running, or when used in conjunction with a thermostat can disable the heat.

High/Off/Low Selector Switch- Switches between the high and low speeds or turns the air curtain off.

Hand/Off/Auto Selector Switch- Switches between the unit running constantly in the hand position, off, and auto, which only runs when the door switch is activated.

On/Off Selector Switch - Switches the air curtain on and off.

Heat On/Off Selector Switch- Turns the electric heat on and off while the fans are running, or when used in conjunction with a thermostat can disable the heat.

Cruise Control Switch with LCD Display

Pre-programmed digital logic controller with a backlit LCD display that takes the place of several individual control components including a Built-in Time Delay Relay, On/Off/Auto Switch, Heat On/Off Switch, High/Low Switch when applicable.
