

AERO

The AERO incorporates architectural style with efficient performance. A bold, aesthetically pleasing air curtain will quietly create an effective barrier to control temperatures and prevent insects, outside air and other elements from entering. The Wi-Fi-enabled AERO Connect controller allows the user to remotely manage all aspects of air curtain operation from a centralized point. This minimalistic air curtain is ideal for stores and shops, outdoor bars, office buildings and other establishments placing a premium on both form and function.
