## ETD & ETD-E | INSTALLATION

**NOTE:** The air curtain should be mounted as close to the door header/opening as possible for maximum performance. For every one inch the bottom of the air curtain is mounted above the door header, the back side of the air curtain should be moved away from the wall 1/2 inch.

### Step 1
Attach top mounting bracket to back of air curtain using the upper mounting holes on back of unit.

### Step 2
Attach the mounting bracket to the wall. Make sure there is sufficient room between mounting plate and ceiling to mount air curtain.

### Step 3
Place air curtain over mounting bracket. The top and bottom brackets will lock into place supporting the weight of the air curtain. Attach the bottom bracket to the air curtain using the lower mounting holes.

---

When mounted, bottom of air curtain is to be flush with bottom of the door header.
